

# Argano EWM SOLUTIONS

## WHY PARTNER WITH US?

### 20+ YEARS

Specializing exclusively with SAP-run businesses gives us unparalleled expertise, tools and accelerators that help you see results within weeks, not years. Our high standards give you better supply chain results.

### GLOBAL REACH

Argano has successfully implemented hundreds of SAP solutions in dozens of countries and works with Fortune 500 clients in the CPG, chemical, life sciences, industrial, retail, high tech and discrete manufacturing industries, to name a few.

### GOLD PARTNER

Argano offers end-to-end support for the full range of SAP products covering supply chain planning and execution, actively partnering with SAP to deliver better solutions to its customers. An effort worthy of a Gold Partner.

## Digitally Transform Warehouse Operations

- Reduce inventory, labor and overall costs of distribution and storage.
- Gain real-time insights on stock levels and replenishment status.
- Improve productivity and eliminate inventory and fulfillment errors.
- Pull data and information from multiple resources for a single material flow system.
- Integrate sales, manufacturing, finance, inventory and transportation operations.
- Respond more quickly and accurately to customer inquiries and concerns.
- Scale operations or react to new market opportunities with speed and flexibility.

### What is SAP EWM?

A flexible, automated tool for managing stocks and processing their movements.

SAP Extended Warehouse Management (EWM) simplifies the complexities inherent in managing high-volume storage and distribution of SKUs across multiple facilities and locations. Streamline the most challenging logistics through powerful automation technologies. Then, turn to the experts at Argano to help build processes and operations that allow all your supply chain stakeholders to efficiently leverage these tools in support of seamless fulfillment for customers anywhere in the world.

### End-to-End Optimization

Reduce your total cost of operations and your total cost of inventory.

From inbound raw materials through internal movements to final distribution and fulfillment, SAP EWM provides the perfect platform. Integrated with S/4HANA to further expand functionality, data can be hosted on-premise or through cloud deployment. With real-time access to all key metrics, planners and operators can minimize handling and optimize stock to maintain the most efficient flow of products and materials. Build for today and be instantly ready for tomorrow.

## From Your Key Warehouse. Through Your Whole Network.

We start implementation of the EWM backbone in your primary warehouse to build processes that take advantage of these powerful new tools. From RFID tracking to package mapping to streamlined pick pack to more efficient put-away operations, our team will optimize the systems and methods to best leverage your new capabilities. After go-live, we remain involved to ensure the integrity of your operations and assist with the necessary knowledge transfer and training your entire team needs to use the tool properly.

## Better Adoption

It takes more than just a powerful tool to make your business run smarter. Your team needs to change their regular routine to use these new processes and that transition can be difficult and uncomfortable. Argano has the expertise, understanding and people skills to engage with everyone in your warehouse operations, from fork operators to package pickers to floor managers, We not only help them use the new tools, we help them love the improvements they bring so your business can realize the full value of your EWM outcome.
